Office Space TI | 3,000 SF | South Jordan, UT | 2024 | Mechanical Engineer

PROJECT OVERVIEW

Office T.I. located on the bottom floor of an office building. We tied into the existing VRF system to condition the space

SCOPE OF SERVICES

- Load Calculations
- HVAC System Design
- Plumbing Design
- Construction Admin

KEY CHALLENGE

The T.I. included more bathrooms than the original designers of the building thought would go into the space, requiring additional exhaust.

OUTCOME

Through on site coordination we were able to find an aesthetic and code compliant location for the exhaust penetration on the side of the building.
