

HEARTH AND HILL RESTAURANT

Restaurant TI | 6,300 SF | Sugar House, UT | 2024 | Mechanical Engineer

PROJECT OVERVIEW

Restaurant space on the ground floor of an 7 story apt. complex featuring 3 kitchen hoods and a separate island bar area

SCOPE OF SERVICES

- Load Calculations
- HVAC System Design
- Kitchen Equipment Design
- Plumbing Design
- Construction Admin

KEY CHALLENGE

The main building was already built, requiring significant coordination to allow all of the kitchen and conditioning equipment into the drop ceiling. The grease duct shafts were also already built making a significant portion of the project inflexible, requiring creative solutions.

OUTCOME

Even though we were coordinating between multiple GC's, sub contractors and owners/tenants the project was able to be completed on time with the look that was consistent with the clients vision.
