

HILLS KITCHEN RESTAURANT

Restaurant TI | 5,000 SF | Sugar House, UT | 2024 | Mechanical Engineer

PROJECT OVERVIEW

Fast casual dining at the bottom of an apt. complex with outdoor seating and a full service commercial kitchen.

SCOPE OF SERVICES

- Load Calculations
- HVAC System Design
- Kitchen Equipment Design
- Plumbing Design
- Construction Admin

KEY CHALLENGE

All of the mechanical equipment had to be located in a drop ceiling with limited space and maintenance access. Due to the outdoor seating the make-up and exhaust air penetration locations had to be carefully coordinated.

OUTCOME

Through several site visits along with coordination during construction aesthetic and code compliant penetration locations were able to be found. Access to maintain equipment was also successfully coordinated.
