

The Front Climbing Addition

Climbing Gym | 30,000 SF | Salt Lake City, UT | 2022 | Mechanical Engineer

PROJECT OVERVIEW

A 20,000 SF addition to the front climbing club including a 10,000 SF remodel to an existing space with climbing walls, saunas and workout rooms

SCOPE OF SERVICES

- Load Calculations
- HVAC System Design
- Demo and Remodel Design
- Plumbing Design
- Construction Admin

KEY CHALLENGE

The project had to be broken into 4 separate phases due to it's new construction and remodel nature. This required coordination between the other disciplines and foresight in how the building would actually be built.

OUTCOME

The remodel was able to successfully integrate the new design into the existing space with no change orders. The new construction portion has yet to be built.
